

D. Marketability Study

Market Potential: The Urban Partners Study

Understanding the Overall Market: The Need for a Town Center

The Market Analysis for Storrs Center has entailed several components. This section summarizes the role of each in the planning process. The initial market study, entitled “Technical Memorandum: Downtown Mansfield Municipal Development Plan Market Study”, was prepared by Urban Partners and completed in November, 2003 (the “Market Study”). Urban Partners was retained by Looney Ricks Kiss, Inc., on behalf of the Mansfield Downtown Partnership, Inc., to complete the Market Study as part of the planning for the Storrs Center project. The complete Urban Partners Market Study is included in this MDP.

The Market Study considers the overall development capacity of Storrs Center and provides a strong understanding of the market that has informed the planning efforts to date. Among other things, the Market Study notes that the actual development capacity for the project area will depend on site constraints, design, development controls, phasing, and sewer capacity limitations. The Market Study identifies the potential for the project area to capture a broad range of residential, retail and commercial market opportunities, with the chief market potential for residential and retail development. In summary, the Market Study recognizes a market potential for 650-850 new housing units in the first five years of development and approximately 183,000 square feet of new retail space with supplemental professional, service, office, and entertainment uses.

The overall conclusions of the Market Study are supported by separate area-wide analyses of the different market components, including a review of population and housing trends, a housing market analysis, a retail market analysis, an office market analysis, a hotel market analysis, and an entertainment market analysis. The housing and retail sections are the most detailed components of the Market Study and provide specific information about several possible target residential markets as well as more specific information as to the types of retail stores for which there is a desire and need. Highly specific insight into the potential retail market is provided through survey responses from students and residents regarding retail goods at Storrs Center.

Prior to moving ahead with project planning, the market experts on the Storrs Center Alliance team reviewed the Urban Partners Market Study in order to ensure that it provided a prudent basis for further analysis and strategy. The Storrs Center Alliance team includes Robert Gibbs, of Gibbs Planning Group, a recognized expert in the fields of urban retail consulting, traditional town planning, and marketing, with a focus on main street projects. Mr. Gibbs reviewed the Urban Partners Market Study and advised that it was a credible, professional and comprehensive report. Mr. Gibbs concurred with the Market Study’s conclusion as to the existence of a significant retail potential in Storrs.

Moving Ahead: Adding Depth to the Market Analysis and the Conceptual Plan

With the Urban Partners Market Study as a foundation, work has been undertaken to better understand the site constraints, engineering requirements, and the goals and desires of the Partnership, the community, and the market. The conceptual plan included in this MDP is a result of this work and represents the effort to combine input related to the market with components of planning that will create a vital and sustainable town center. As the plan continues to be refined, Storrs Center Alliance will continue to study the marketplace in order to identify those market opportunities that would be most appropriate and marketable for Storrs Center and responsive to the goals of the Partnership.

Creating a Vital Retail and Commercial Center: The Village People Approach

Moving beyond the Market Study, the Storrs Center Alliance team has made significant independent efforts to understand the market. These efforts are being led by the Village People, a division of Intrawest Corporation. Specialists in the creation of highly successful village environments, the Village People have the demonstrated capacity to translate their understanding of a particular market into a vibrant and successful program of commercial uses with a genuine sense of place and vitality.

Rather than simply filling spaces with tenants willing to pay the highest rent, and allowing traditional leasing results to create the environment, the Village People first define a program of uses that stems from the project goals and from their understanding of the community, the site and the market. They can then identify and install retail concepts that respond directly to the needs of that program.

In their effort to fully understand a commercial market, the Village People team endeavors to gain an understanding of the “culture” of a community; they believe this will ensure the most appropriate form of commercial development for the project. This effort includes studying the community’s heritage and history, as well as its current status and behavior, both of which are necessary to the planning of developments that make sense in their particular context, have lasting and genuine appeal, and cater to a market’s specific needs and desires. The Village People work to interpret culture and behavior by conducting interviews and surveys, as well as by collecting and analyzing demographic information.

The commercial study undertaken by the Village People results in a proprietary Commercial Development Analysis (“CDA”). A primary purpose of the CDA is to establish an optimal amount of commercial space to build and the associated timing or “phasing” plan. Phasing serves to ensure that the tenants will be financially viable throughout all stages of the development by matching commercial supply with the estimated market demand. Additional commercial square footage is only developed once it is believed that it can be sustained by the overall projected commercial economy.

Field research performed to date by the Village People has consisted of telephone interviews, face-to-face interviews, focus group meetings and surveys. Subsequent surveys are periodically conducted to fine tune the development model from time to time. Among other things, the survey results are used to determine the spending propensity for the Mansfield market and to project spending for the Storrs Center project. To date, several hundred people have been surveyed or interviewed. The survey subjects have been drawn from a cross section of residents, University students, faculty and staff, and visitors to Storrs.

Additional information was obtained by meeting with the Senior Administration of the School of Fine Arts, led by Dean David Woods. The School of Fine Arts has retained extensive records of attendance at concerts and events in order to better plan for future growth. Their studies reveal that the School of Fine Arts receives 200,000 visitors each year to its numerous venues, which represents a significant potential for dedicated consumer spending. This visitation has been conservatively cross-referenced with the information received from the Lodewick Visitors Center to avoid double counting.

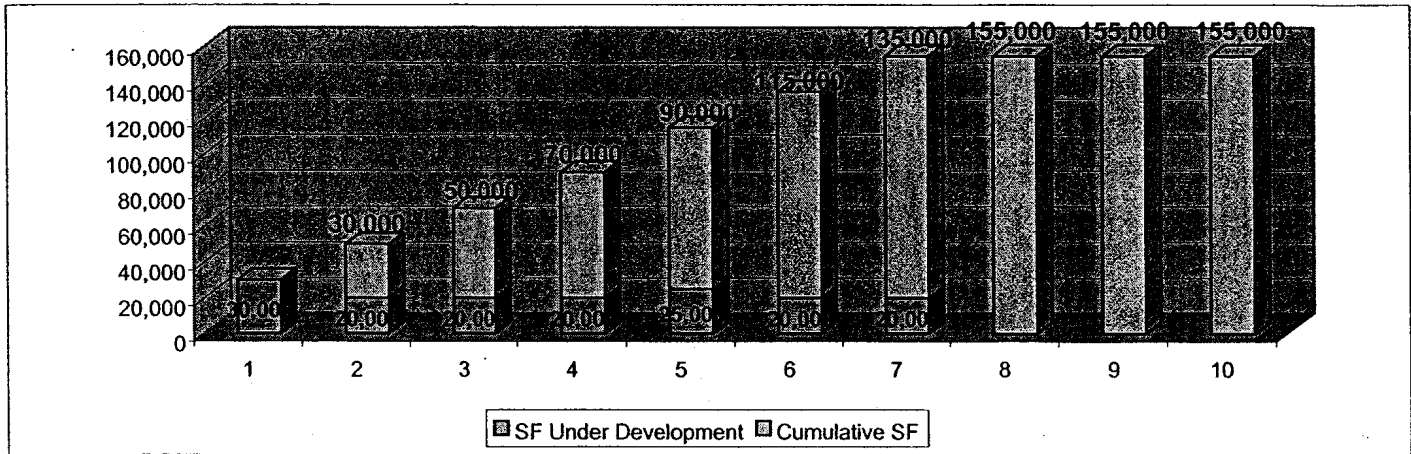

The location of the Fine Arts Complex, directly across the street from the proposed development site, is of particular significance. It is important to note that the School of Fine Arts is planning an ambitious new Fine Arts building complex, designed by world-renowned architect Frank Gehry. Such a complex will give the University and the Town of Mansfield significant public exposure throughout the Northeast. Furthermore, according to Dean Woods, it is the intention of the School of Fine Arts to expand the programming rather dramatically – including the establishment of a summer home for the Metropolitan Opera of New York (similar to the Tanglewood Festival in Massachusetts). Such a program would expand the season for the Fine Arts School to a true 12-month season. A successful implementation of the Fine Arts plans would contribute to a significant increase in potential consumers.

Additional input has been obtained through meetings with students and staff of the Fine Arts School. With the assistance of Dean Woods and his staff, student representatives have also met with members of the Storrs Center Alliance team, providing direct insight into the needs and desires of some of the students with respect to the project.

The method employed by the Village People to select tenants contrasts significantly with conventional commercial real estate leasing. The procedure employed by the Village People to identify those businesses that will be selected for participation in the project is referred to as “casting.” Casting is a process whereby multiple prospective tenants will compete to be selected for Storrs Center, leading to selection of the best operators and concepts for each use in the new village. The casting process will be a critical factor in determining whether people will want to return to Storrs Center frequently and spend money at the project.

The Economic Outlook: Projections for Build-Out

The CDA prepared by the Village People suggests the following retail development timeline for total square footage over a ten year period.

The recommended 155,000 square feet of retail space in the foregoing timeline does not include space for a grocery store, a drug store or certain other service-oriented uses that are believed to be sustainable in Storrs Center. It is estimated that an additional 45,000 to 50,000 square feet of such uses are feasible, bringing the total retail square footage now envisioned to approximately 200,000 square feet.

The estimated annual visitation levels and the projected retail expenditures are as follows:

a. Visitation (annual customer visits, by category)

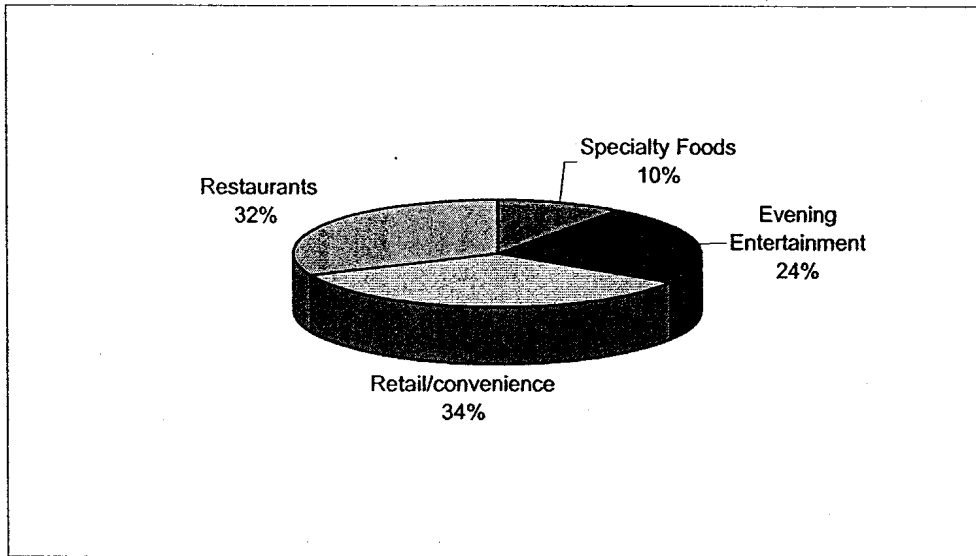

Project Year	1	2	3	4	5	6	7	8	9	10
UConn Students	242,706	414,210	599,421	798,340	1,010,967	1,191,846	1,372,725	1,553,605	1,734,484	1,915,363
UConn Faculty & Staff	18,732	34,819	52,236	70,981	91,056	108,282	125,509	142,736	159,962	177,189
Residents: Mansfield and Surrounding Towns	180,905	336,454	494,007	653,593	815,245	978,991	1,144,864	1,312,895	1,483,117	1,655,560
Destination Visitors	39,179	42,881	46,584	50,287	64,161	70,039	76,112	82,380	88,842	104,407
Total	481,521	828,364	1,192,248	1,573,202	1,981,428	2,349,159	2,719,211	3,091,615	3,466,405	3,852,520

b. Projected Retail Expenditures for Storrs Center (in '000s -- excludes groceries and services):

Project Year	1	2	3	4	5	6	7	8	9	10
Projected Annual Spending	\$ 7,864	\$ 13,619	\$ 20,028	\$ 27,134	\$ 35,843	\$ 43,704	\$ 52,070	\$ 60,967	\$ 70,423	\$ 80,466

The following table shows, in general, the estimated allocation of uses for the commercial space for Storrs Center, excluding regional service uses planned for

development in Phase Three (which would substantially increase the retail/convenience percentage).

Restaurants

Among the factors affecting the programming of restaurants is the desire for various kinds of restaurant experiences ranging from 24 hour “grab and go” diners to the more occasional fine dining experience. A clear desire has been expressed for a town center area where several restaurants are clustered in close proximity. The spaces should be small (majority about 1,000 – 1,500 square feet with kitchen) and simple, with some offering limited but almost communal seating. Some establishments should have delivery, pick up menus, and a ‘grab and go’ counters to accommodate the need for quick service. There should be small terraces outside to accommodate the desire to be outdoors and also to create the animation and energy that attracts others. There should be several menus that focus on hardy, inexpensive foods. There is a strong market for ethnic foods as well as for healthy alternatives that offer cafeteria style, make it yourself, ‘feels like home’ food and sandwich/deli shops. 24 hour breakfast diners are always a favorite and are consistent with the strongly expressed desire for more around the clock commercial availability.

Retail and Service Uses

Looking at highly ranked university experiences for students as a springboard, every square foot of retail has to be good in order to maximize the use and quality of the limited space. In contrast to the usual shopping center mix that includes about 80% national retailers, the retail component for the town center should be broken down into 30% national concepts for clothing that tends to occupy larger spaces, 10% boutique shops and the remaining 60% for specialty items. Consistently, one would find at least some large commercial concepts like The Gap, J. Crew or Urban Outfitters that are trusted names with perceived value. The majority of the shops should be smaller unique retailers with a

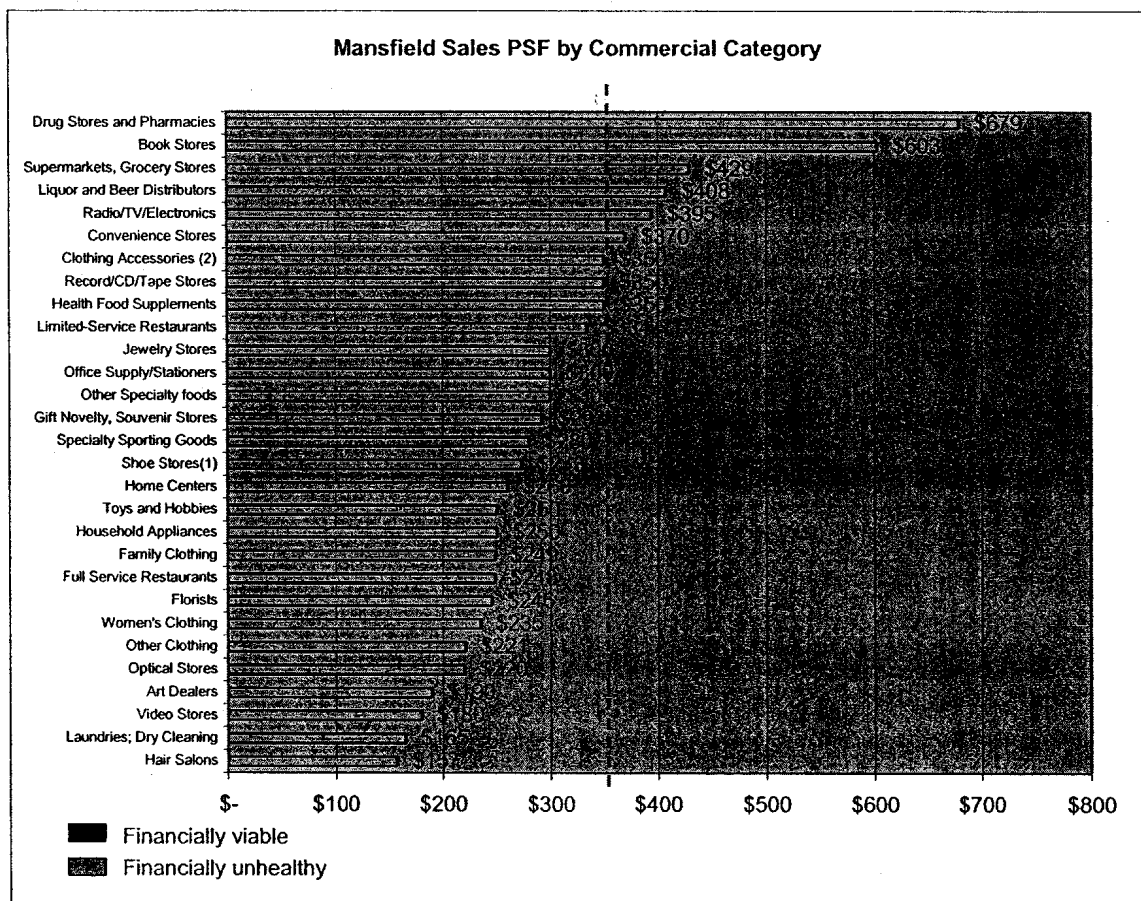

focus on regional origins and appeal. Interest has been expressed in a number of the following typical retail uses, to name a few: logo wear and sporting goods, craft shops selling art supplies, posters and décor items, camera/electronic shop, bookstores with café components, jewelry and accessories, hair salon offering limited services such as manicures and pedicures, flower shop, and CDs to be sold as part of a café or bistro. Larger uses in Phase Three of the project might include a grocery store and a pharmacy.

Evening Entertainment

As an alternative to more traditional nightlife, the project should include one or more pubs, but must also include nighttime venues that promote activities other than drinking. These activities should include entertainment with live music, viewing balconies for people-watching, and large screen TVs for sporting events. As for underage students, they will be seeking evening entertainment and it is important to provide safe environments with proper supervision.

Learning From the Current Commercial Environment

The following chart provides an indication of sales per square foot at businesses operating in Mansfield today:

Observation of the current commercial environment reveals that many tenants may not be profitable. The current commercial environment does not provide an atmosphere for success – existing conditions simply do not support a vital or sustainable business environment and turnover is fairly regular as a result. By creating a more vibrant setting for business development and attracting a core of top notch retail operators, Storrs Center will respond to the needs of the market and create a healthy, sustainable business environment.

The Residential Market: Zimmerman/Volk Associates

Filling in the Details for the Residential Market

Using the Urban Partners Market Study as a beginning point in the analysis of residential potential for Storrs Center, the Storrs Center Alliance has retained the services of Zimmerman/Volk Associates to assist in the formulation of a more detailed analysis of the residential market and a more detailed program for residential uses that is commensurate with current planning goals. Zimmerman/Volk Associates specializes in the market analysis of compact and sustainable development, including mixed-use revitalization projects. Recognized by practitioners of New Urbanism as the leading national expert on the market feasibility of New Urbanist communities, Zimmerman/Volk Associates has begun their analysis of the residential market for Storrs Center and will be working with the Storrs Center Alliance team to assess the market in detail and develop a program for the optimal market position for new multi-family rental and for-sale dwelling units at Storrs Center.

Methodology

The proprietary target market methodology developed by Zimmerman/Volk Associates uses Claritas' PRIZM geo-demographic system to establish the optimum market position for residential development of any property. Using geo-demographic segmentation clusters as the basis, Zimmerman Volk's methodology divides the residential market into 41 target market groups. The draw areas for a project are identified through field investigation, analysis of historic migration and development trends, and employment and commutation patterns. Zimmerman/Volk's analysis includes recommendations for unit sizes, rents and/or prices – and projections of absorption in the local housing context.

The preliminary technical analysis of residential market potential for Storrs Center has included delineation of the draw areas and physical evaluation of the site and context. The delineation of the draw areas for housing within Storrs Center was based on historic settlement patterns, migration trends for Tolland County, and other market dynamics. The primary draw area for new residential construction includes Tolland and Hartford Counties, as well as the adjacent and nearby counties of Windham, New London, Middlesex and New Haven in Connecticut and Hampden County in Massachusetts. The analysis also considers the potential represented by graduate students, faculty and staff, and all other counties represented in Tolland County migration.

Preliminary Conclusions

Preliminary results of the Zimmerman/Volk analysis support the major conclusions of the Urban Partners Market Study. The initial reporting indicates that an optimum residential mix would include the full range of housing types, corresponding to existing target market household preferences. However, given the objective of establishing a mixed-use development on the site that will serve as Mansfield's town center, the most appropriate housing type is multi-family, either rental or for-sale. The higher concentration of residents in multi-family housing will provide the most support for the proposed retail and entertainment uses. Early conclusions suggest that a range similar to that suggested by the Urban Partners study, including as many as 750-850 housing units, could be supported by the market.

An initial interpretation of the information indicates that the potential market for new rental and for-sale multi-family housing units to be constructed within Storrs Center consists of predominantly one- and two-person households, empty nester and retiree households, and younger singles and couples. The Storrs Center development represents an opportunity to live in an environment which currently does not exist anywhere in or near Tolland County. Not only will Storrs Center provide a variety of retail, dining and entertainment venues, but it will offer newly-constructed housing that, in the immediate area, is now largely limited to single-family detached houses.

Additional Factors Affecting the Residential Market

Zimmerman/Volk has completed their initial field investigation and has provided a site overview that identifies challenges and offers suggestions for obtaining optimum market position. Success will depend upon an appropriately-scaled urban master plan; appropriate response to the site's assets and challenges, including the particular need to enhance pedestrian passage and safety along and across Storrs Road; concurrent development of proposed commercial uses as needed to sustain the residential community; the multi-family purchase and rental propensities of the draw area; current residential market dynamics in the market area; and the marketing campaign.

Stemming from that analysis are also preliminary details of the optimum residential mix by unit type, including potential rental studios, lofts, and one and two bedroom units and potential for-sale studios, lofts, one to three bedroom units, townhouses and live/work units with offices. Suggested considerations for design and amenities include secure WiFi internet access, as has been suggested by numerous students, faculty members, and town residents.

Zimmerman/Volk's work generally supports the projected absorption rates of the Urban Partners Market Study and the capacity of the project to absorb the proposed number of units, if properly programmed, within six years. It is suggested preliminarily that the marketing and pre-leasing effort could reserve up to 10 percent of the total rental units prior to construction. Lease-up of as many as 350-400 rental units could be complete within three-and-a-half to five years. In turn, absorption of as many as 350-400 for sale

residential units could be achieved within four-and-a-half to six years from commencement of marketing.

Marketing on the Move: Planned Flexibility

Adapting the Project to the Evolving Market

The preceding forms of market analysis provide insight into the overall market, and, in an ongoing effort, have provided preliminary insight into the commercial/retail market, and the specific residential market, all of which will affect the planning of the project as it proceeds towards actual construction. The most immediate impact of these various analyses will be upon the first phase of the project. The proper mix of commercial and residential uses in the first phase must not only appeal to the market but should begin to better define the market as a critical mass of shops, restaurants, businesses, and residents begins to accumulate.

As the first phase unfolds, the success of the project in attracting a critical mass and in providing a vibrant commercial environment will be a decisive factor in attracting residents and businesses to future phases. The project should maintain enough flexibility to respond to the evolving marketing information and create a village of genuine and lasting appeal in the Mansfield community.

(Note: This summary amounts to an outline of the various forms of analysis that, together, will provide the marketing basis for the project. The information contained in this marketability section represents only a limited summary and interpretation of work performed by several consultants. The Urban Partners Market Study on the overall market is complete and consequently is included as a reference. Reports from the Village People and Zimmerman/Volk Associates have been issued in preliminary format and are presently ongoing. This report is intended to summarize the methodology included in those reports and certain basic conclusions, without releasing proprietary information accumulated in the initial stages of market analysis. Reports and consultant information referenced in this summary are intended solely for the use of Storrs Center Alliance LLC and only in connection with the development of Storrs Center, and may not be relied upon by any other person or used for any other purpose without prior written consent of Storrs Center Alliance LLC and the particular consultant involved in preparing the information. While care has been taken to seek out reliable sources and use good judgment, the accuracy of the projections and the effectiveness of the recommendations summarized herein are not guaranteed.)

**Technical Memorandum:
Downtown Mansfield Municipal Development Plan
Market Study**

Prepared for:

Mansfield Downtown Partnership

Prepared by:

Urban Partners

November 2003

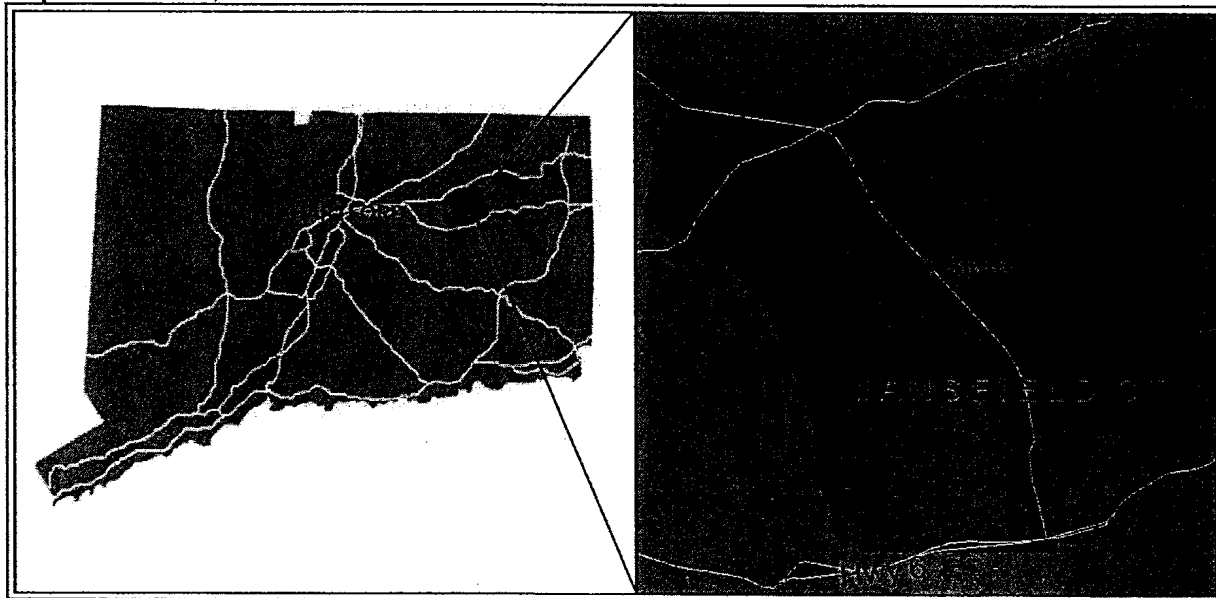

1.0 INTRODUCTION

Located in rural Tolland County, Mansfield is about 30 miles from Hartford and can be accessed by major interstate and state highways, such as interstates I-84, I-384, and I-395 (see **Map 1**). Routes 195, 44, and 32 are other primary arteries leading into Mansfield. The town is home to the main campus of the University of Connecticut at Storrs (the University), which is situated in the center of Mansfield and is the largest employer in the area. As a result of the University presence, commercial and real estate market conditions in Mansfield are affected by the fluctuations that stem from a seasonal college population. Retail activity in Mansfield is concentrated in these locations: (1) near the intersection of Storrs Road (Route 195) and Highway 6 (including the East Brook Mall); (2) near the intersection of 44 and 195, and (3) to a lesser extent, in Storrs.

The Mansfield Downtown Partnership has retained a consultant team led by Looney Ricks Kiss to prepare a Municipal Development Plan for Downtown Mansfield. Urban Partners is the subconsultant for the market analysis and economic development portions of this study. The 44-acre site proposed for the municipal downtown, referred to in this report as Storrs Center, is at the intersection of Dog Lane and Storrs Road (Route 195) and is just eight miles from I-84. The proposed Storrs Center is centrally located in Mansfield where there is already a concentration of retail activity and is adjacent to the post office, town hall, the high school, and the University.

In this technical memorandum, we present a market assessment of housing, retail, commercial, and entertainment uses, which may be appropriate for development in Storrs Center. The trade area for competitive analysis of real estate market conditions in this assessment varies depending on the development type and is determined by the distance that the typical customer is willing to travel for a particular product, as well as the proximity of the competition. For example, we have defined the trade area for senior housing as 15 miles, while the full trade area for retail analysis in this study was determined to be 10 miles. This memorandum includes a full retail, commercial, residential, entertainment, and hospitality market analysis as well as the results of surveys given to students and Mansfield residents.

Map 1: Mansfield, CT

2.0 SUMMARY OF DEVELOPMENT POTENTIAL FOR STORRS CENTER

The overall development capacity of Storrs Center will depend on site constraints, design, development controls, phasing, and sewer capacity limitations. However, the market analysis detailed in this report has identified the potential for Storrs Center to capture a broad range of residential, retail, and commercial market opportunities, the total of which may exceed the physical constraints of the site. The **chief market potential is for residential and retail development**, though this development can be supplemented by a limited amount of office and entertainment uses. Significant residential and retail development opportunities for the first five years of development include:

- **200 to 250 units of sales condominium flats and townhomes.** Most units will be in the 1,200 to 1,600 SF range, though some could be as large as 2,200 SF. Constructed in two- to four-story buildings, these units should sell in the \$165 to \$180 per SF price range (sales prices of \$215,000 to \$285,000 at 2003 prices).
- **125 to 150 units of townhome-style duplexes and small lot single-family homes.** Most units will be in the 1,800 to 2,400 SF range, priced at \$145 to \$175 per SF (sales prices of \$315,000 to \$350,000 at 2003 prices).
- **225 to 350 rental apartments targeted to non-student and graduate student households,** which could be accommodated in a range of building types—even mid-rise apartment towers—and could be priced at \$1.45 to \$1.55 per SF per month at 2003 prices.
- **A 100-household Continuing Care Retirement Community** with 70 independent living residential units, 20 assisted living units, and a 60-bed nursing facility.
- **38,000 SF of new convenience retail stores** serving immediately adjacent residents.
- **16,000 SF of full-service restaurants** to create an active evening atmosphere.
- **59,000 SF of apparel stores** creating a niche identity distinct from typical mall offerings.
- **70,000 SF of home furnishings, other shopping goods, and freestanding stores** attracting customers from throughout a 10-mile trade area.

In total, this potential yields **650 to 850 new housing units in the first five years of development and 183,000 SF of new retail space.** This core development program can be supplemented by a limited amount of **professional and service office space.** The area can also support a six-to-eight screen **movie theater**, but this scale of operation is too small to be economic without developer or institutional participation in ownership.

3.0 POPULATION AND HOUSING TRENDS

3.1 Population

As reported in the 2000 Census, Mansfield's population was 20,720, of which 7,433 were students living in dormitories on the UConn campus (see **Table 1**). UConn undergraduate dormitory capacity, however, has grown significantly since 2000; as of September 2003, 10,717 undergraduates resided in University housing. The number of graduate students housed by the University has also increased, adding 150 students. As a result, we believe that the total Mansfield population during the school year has grown to 24,150.

Table 1: Population Trends, 1990-2000

Location	Census 1990	Census 2000	% Change 90-00
Connecticut	3,287,116	3,405,565	4%
Tolland County	128,699	136,364	6%
Mansfield Town	21,103	20,720	-2%
College Dormitory Population	8,605	7,433	-14%
Non-Dormitory Population	12,498	13,287	6%

Source: U.S. Census

Current University enrollment is 14,107 full-time and 374 part-time undergraduates and 2,306 full-time and 329 part-time graduate students. In addition, the University currently employs 3,690 full-time and part-time faculty and staff. The University intends to hold its enrollment, faculty, and staff at current levels for the foreseeable future.

3.2 Housing

The number of housing units in Mansfield increased by 323 in the 1990s, bringing the total number of units to 5,481 in 2000. Occupied-housing units also grew in the last decade with 360 additional occupied units in 2000. This increase brings the total number of occupied units to 5,291 units. As a result of this increased occupancy, the vacancy rate decreased to a negligible 3.5% in 2000 (see **Table 2**).

Table 2: Housing Units, 1990-2000

Location	Housing Units			Occupied Housing Units			Vacancy	
	1990	2000	Change 90-00	1990	2000	Change 90-00	Percent 1990	Percent 2000
Connecticut	1,320,850	1,385,975	65,125	1,230,479	1,301,670	71,191	6.8%	6.1%
Tolland County	46,677	51,570	4,893	44,309	49,431	5,122	5.1%	4.1%
Mansfield Town	5,158	5,481	323	4,931	5,291	360	4.4%	3.5%

Source: U.S. Census

Tolland County grew by 6% during that same time period, adding 7,665 residents. This growth rate outpaced the 4% growth rate of the State of Connecticut. In Tolland County, the number of housing units increased by 4,893 to 51,570 units, while the number of occupied housing units increased by 5,122 to 49,431. As in Mansfield, the growth in demand for housing relative to the slower growth in supply pushed the vacancy rate down 1% to 4.1% in 2000.

Owner-occupied housing in Mansfield represented nearly 62% of the housing market in 2000, which is up from the 60.6% share in 1990. There were 284 more owner-occupied units in 2000, bringing the total to 3,271 (see **Table 3**). Of the owner-occupied housing units, 12% were condominiums.

This is a moderate increase over 1990, with 92 additional condos in supply.

Occupied rental housing units increased by only 76 in the 1990s, bringing the total to 2,020 (see **Table 4**). It is not surprising that the number of renter-occupied units did not increase substantially because there have been virtually no rental units added to the market and vacancy has remained low in the 1990s. This is due, in part, to the lack of a public sewer system, which restricts the potential for new high-density development.

Table 3: Owner-Occupied Housing Units, 1990-2000

Location	Owner-Occupied Units				
	1990	2000	Change 90-00	Percent 1990	Percent 2000
Connecticut	807,481	869,729	62,248	66%	67%
Tolland County	31,901	36,309	4,408	72%	73%
Mansfield Town	2,987	3,271	284	61%	62%

Source: U.S. Census

Table 4: Renter-Occupied Housing Units, 1990-2000

Location	Renter Occupied Units				
	1990	2000	Change 90-00	Percent 1990	Percent 2000
Connecticut	422,998	431,941	8,943	34%	33%
Tolland County	12,408	13,122	714	28%	27%
Mansfield Town	1,944	2,020	76	39%	38%

Source: U.S. Census

4.0 HOUSING MARKET ANALYSIS

4.1 Sales Housing

The number of homes that sold in Mansfield in 2002 was 136, up from 115 in 2000. More than half of these homes sold for between \$100,000 and \$200,000. Eighteen percent sold for less than \$100,000 and another 18% sold for between \$200,000 and \$300,000. A higher percentage of homes sold in the lower ranges in 2000 than in 2002, with 81% of sales under \$200,000 in 2000 versus 72% in 2002. Conversely, there were a greater number of higher priced homes in 2002, with 13 homes selling for over \$300,000 versus 2 homes in 2000 (See Table 5a).

In 2002, there were 110 single-family homes that sold in Mansfield, with a median sales price of \$170,200. The homes ranged in price from \$10,680 to \$575,000, with 85% of the home sales falling in the \$110,500 to \$330,000 range. The period between January to July 2003 experienced a moderate increase in the median sales price. There were 58 single-family homes that sold during this time, generating a median sales price of \$178,000 – just a 4.5% increase over the previous year. These homes ranged in price from \$67,500 to \$410,000, with 85% of the home sales falling in the \$125,000 to \$295,000 range (see Table 5b).

Table 5a: Residential Sales Distribution, 2002

Price Range	2000		2002	
	Number of Sales	Percent of Total Sales	Number of Sales	Percent of Total Sales
Less than \$100,000	22	19%	25	18%
\$100,000 to \$199,999	71	62%	74	54%

Table 5b: Sales Housing, 2002 & Jan-July 2003

	Year 2002		Jan-July 2003	
	Total Sales	Median Sales Price:	Total Sales	Median Sales Price:
Condominium	26	\$90,000	20	\$112,000
Single-Family Homes	110	\$170,200	58	\$178,000
Total	136		78	

Source: Realist

Condominiums have been selling at a much faster pace in 2003. There were 26 condominiums that sold in 2002 versus the 20 condos that have sold in just the first seven months of 2003. Prices also escalated, as the median sales price in 2002 was \$90,000 and the median sales price between January and July 2003 jumped to \$112,000—a 24% increase over the previous year. Most condominiums are flats in low-rise (largely two-story) buildings; a few are townhomes.

Residential real estate listings showed 53 homes on the market as of May 5, 2003, including condos and single-family homes. The homes ranged in asking price from \$109,900 to \$649,900 for a single-family home and \$69,900 to \$234,000 for a condominium. According to local realtors, there are usually about 35 listings at any given time, and, if priced correctly, tend to sell within a week. Demand for condominiums is especially high, as realtors maintain a list of clients who are waiting for condos to come on the market. Over the last couple of years, sales prices have been increasing at about 5% each year. Sales prices for condominiums have increased dramatically with condos that sold for \$139,000 last year now on the market for \$169,000. However, the development of

condominiums is restricted due to severe limitations of the town's sewer capacity. The few recently constructed condominiums in Mansfield are reasonably large (1,200-1,600SF) and are selling for prices in the \$155 to \$160 per SF range.

According to local realtors, buyers usually are associated with UConn and are either first-time homebuyers or are upgrading to a larger home. Realtors noted the fact that there is a shortage of housing in the \$250,000 to \$350,000 range, despite the high demand for such housing in Mansfield. Buyers are attracted to Mansfield for its nationally ranked, Blue Ribbon school system, which is considered the best in the area, and also for its proximity to the University.

Between 1996 and June 2003, 390 new privately owned residential building permits were granted, almost all of which were single-family homes. The number of building permits issued during this time period reached its peak in 1999 at 74 new permits. According to realtors, many of these new homes are built speculatively and are priced in the \$300,000 to \$400,000 range and range in size from 2,600 to 2,800 square feet. The price per square foot is between \$142 to \$152 for a single-family house on approximately a one-acre lot. In the past, these homes would remain on the market for some time. Now, however, the market is catching up to this price range, causing houses to sell quickly and fewer homes built on speculation.

Market Position and Opportunities for Storrs Center

Successful sales housing types in Storrs Center will need to achieve a balance between the density necessary to support an active, walkable community and the ex-urban/village architectural styles that have received market acceptance in the area. This suggests that the appropriate housing types will mostly include townhomes and condominium flats in low- to mid-rise buildings (three or four stories). Site and environmental conditions at the periphery of the municipal downtown may result in certain compact and irregularly shaped development sites that would be appropriate for townhome-style duplexes or very small lot single family homes. Furthermore, the ability of Storrs Center to capture all of the demand will be dependent on site constraints and priorities of development options.

Sources of demand for these housing types are likely to come from four sources:

- **Pent-up condominium/townhome market.** Recent development limitations in Mansfield due to sewer constraints have restricted condominium/townhome development to the point where there is substantial pent-up demand. Overall sales patterns suggest that demand for condominium/townhome units represents 20-25% of the total home purchase market, but condominium/townhomes have been only a small fraction of the 400 new homes constructed in the past seven years. Given these circumstances, we estimate pent-up demand for new condominium/townhomes at 100 to 125 units, almost all of which could be captured in Storrs Center within a two-year period.
- **On-going housing market growth in Mansfield.** Recent patterns show that Mansfield has been absorbing approximately 60 new single family units per year and could probably absorb 15 to 20 additional condominium/town-home units if sewer needs were met. Attractive

development at Storrs Center over the next five years could be expected to capture one-third of the single family market in duplexes and small-lot singles, as well as 60% or more of the condominium/townhome market.

- **Spillover development from the Tolland/I-84 corridor.** Sales housing development has accelerated in Tolland, especially along the I-84 corridor. A dynamic development at Storrs Center could attract a portion of this market, but it is difficult to quantify this demand precisely.
- **College Town Center ambience market.** The development of an attractive Town Center at the UConn campus will attract a additional segment of homebuyers desiring adjacency to the ambience of the college campus. Again, this market opportunity is difficult to quantify precisely, but we expect that it will grow in significance as Storrs Center matures and will be an important market segment by the fifth year of development.

Taken together, we estimate that Storrs Center can attract a total of 325 to 400 home purchasers to a variety of reasonably dense, but village-friendly housing types during the first five years of development.

Unit Mix, Pricing, and Absorption

We anticipate that for the first five years of development, the appropriate unit mix for sales housing in Storrs Center will include 200 to 250 condominium flats and townhomes in two- to four-story structures and 125 to 150 townhome style duplexes and small-lot singles. The market for condominium flats and townhomes is strongest in the 1,200 to 1,600 SF range, though some units could range up to 2,200 SF. Duplexes and small-lot singles will likely be somewhat larger—in the 1,800 to 2,400 SF range.

At 2003 price levels, we anticipate that the condominium/townhomes will sell in the \$165 to \$180 per SF range (sales prices of \$215,000 to \$285,000). Larger duplexes and small-lot single family homes will likely be priced in the \$145 to \$175 per SF range (sales prices of \$315,000 to \$350,000).

Given the pent-up demand for condominium/townhome units in Mansfield, we anticipate the absorption of 80 to 100 condominium/townhome units per year for the first two years of development, along with 25 to 30 units per year of duplexes and small-lot singles. After the pent-up demand is exhausted, we anticipate that the pace of absorption will slow to 15 to 20 condominium/townhome units and 25 to 30 duplex/singles annually.

4.2 Rental Housing

Rental housing represents 38.2% of the housing market in Mansfield in 2000. Rental units are provided in low-rise garden apartment buildings, duplexes, and single-family homes. This report concentrates on all but the single-family rental homes.

There are a total of 723 apartment units in Mansfield. Asking rents range from \$545 for a 450 SF apartment to \$1,500 for a 1,000 SF apartment. The average price per square foot in Mansfield is \$1.21. All of the apartment complexes in Mansfield are always or almost always at full occupancy, and many maintain waiting lists. The style and pricing of the apartment complexes in Mansfield are very similar, some of which include:

- **Millbrook Apartments:** This complex is located just over two miles from campus and offers one- and two-bedroom units at 700 and 800 SF, respectively. One bedrooms rent for \$650 and two bedrooms rent for \$825. The apartment buildings are 1.5 stories (first floor is partially below ground). The complex consists of three residential buildings that contain four apartment units per building.
- **Maplewood Apartments:** Maplewood is located approximately two miles from campus and offers only two-bedroom units of 756 SF that rent for \$690. The complex consists of 10 residential buildings that contain four apartment units per building.
- **Oakwood Apartments:** Oakwood is located approximately two miles from campus. The apartment complex rents only one-bedroom units of 450 SF at \$545. The apartments are single-story buildings, and the complex consists of five residential buildings that contain two apartment units per building.
- **Knollwood Apartments:** Located less than one mile from campus, Knollwood offers one- and two-bedroom units with 505 SF and 756 SF, respectively. The one bedrooms rent for \$611 and the two bedrooms range from \$675 to \$700, depending on first or second floor occupancy. The first floor units are partially below ground. The complex consists of 34 residential buildings that contain four apartment units per building.
- **Clubhouse Apartments:** Clubhouse is located just over one mile from campus. The apartments include 600 SF one-bedroom units and 756 SF two-bedroom apartments, priced at \$625 and \$900, respectively. The buildings are two stories. The complex consists of 11 residential buildings that contain four apartment units per building. The property has 17 one-bedroom units and 27 two-bedroom units.

Approximately 2,950 full-time undergraduates live off campus in nearby communities. Because of the low supply of apartments in Mansfield, however, approximately 2,000 students are forced to look in nearby communities like Ashford, Vernon, Willimantic, and Willington. Students even live as far away as Manchester, which has rents between \$1.00 and \$1.27 per square foot. Ashford apartments rent for \$1.28 per square foot, Vernon for \$1.00, Willimantic for \$.86, and Willington for \$1.23 per square foot (see Table 6). Each of the apartment complexes outside of Mansfield that were interviewed stated that there was either no vacancy or very little vacancy.

Table 6: Area Apartment Rental Rates

Town	Rent/SF
Willimantic	\$0.86
Vernon	\$1.00
Mansfield	\$1.21
Willington	\$1.23
Ashford	\$1.28

Source: Various

Market Position and Opportunities for Storrs Center

The rental market in Mansfield is extremely tight. Its growth has been limited not by demand but by limitations in the town's sewer capacity. If the new Storrs Center were to accommodate increased sewer usage, there will be strong demand for new rental housing. The rental housing market includes three key segments: (1) undergraduate students; (2) graduate students; and (3) non-students.

- **Undergraduate housing market.** Approximately 2,950 full-time undergraduate students currently live off-campus. Census data indicate that approximately 33% of these students live in Mansfield, but 67% (2,000 students) have needed to find rental housing in more distant, but adjacent communities. We should note, however, that with the physical constraints of the proposed municipal downtown, it will be difficult to provide undergraduate housing without adversely affecting the other housing segments. In particular, other households may find it difficult to reside in the immediate vicinity of a dense concentration of undergraduates.
- **Graduate student housing market.** UConn currently enrolls approximately 2,300 full-time and 300 part-time graduate students, 80% of whom live off-campus. Census data indicate that approximately 1,500 of these full-time students have needed or chosen to find housing in adjacent or more distant communities. We estimate that 40-50% of these 1,500 graduate students would find new rental housing in Storrs Center more attractive than these distant locations. At an average of 1.7 students per unit, this market segment would support 350 to 450 new rental housing units in the Center. This market, however, can be highly sensitive to rent levels, constricting economically effective demand. Development of substantial numbers of graduate student apartments may require University participation in financing. Independent of such participation, economic market demand from these households themselves may limit development to 100 to 200 one- and two-bedroom apartments.
- **Other rental housing market.** Approximately 54% (1,100 units) of rental housing in Mansfield is occupied by non-student households. About 40% of these households live in single-family homes and duplexes, but the remaining 60% occupy apartments. Rental apartment development for the general, non-student population has also been constrained in Mansfield by the absence of a sewer system, suggesting that there is some pent-up demand for new apartments as well as limited on-going growth in this demand. We estimate this pent-up demand at 75 to 100 units of one- and two-bedroom apartments, which could be absorbed immediately. On-going growth in apartment demand for this segment is approximately 10 units per year, providing the opportunity to add another 50 units of apartments four to five years after development of this initial product.

Taking the graduate student and non-student market segments together, we estimate that Storrs Center can absorb 225 to 350 new rental housing units in the first five years of development. These estimates do not assume University participation in the development of graduate student housing.

Unit Mix, Pricing, and Absorption

We anticipate that for the first five years of development, a marketable mix for rental housing in Storrs Center would include 225 to 350 one- and two-bedroom apartments targeted to the graduate student and non-student markets. The apartments will need to be in the 650 SF to 1,000 SF range and include a moderate level of amenities. Rental units could be priced in the range of \$1.45 to \$1.55 per SF per month at 2003 prices. These units could be accommodated in a range of building types, even mid-rise apartment towers, with urban design considerations being the guiding force in this determination.

The market conditions described above indicate that all but about 50 of these units could be absorbed within the first year or two of initial development. There may be opportunity for additional development of graduate student housing beyond the 100 to 200 unit level suggested here. Testing of the market with this initial product will determine whether the number of rental units produced for this segment can be expanded.

4.3 Age Restricted Housing

The age-restricted communities (also known as active adult) are targeted to people 55 years and older and are not eligible to families with children living at home. These communities offer total independence, and there is an emphasis on recreational amenities, such as golfing and tennis. Health care services, however, are not common. The typical community offers for-sale units of varying sizes, and the scale ranges greatly from 20 to over 1,000 units. Because active adult communities do not provide health care services, they are not regulated.

Active adult communities are difficult to track due to the fact that they are privately developed sales housing. Glen Ridge is an active adult community in Mansfield that has a total of 51 units. The homes are each 1,185 SF and are priced at \$189,900. The developer has had difficulty finding enough demand to complete the project. The first phase began in the mid-1980s with 36 units, but the final phase of just 15 units took four years to be absorbed. While absorption accelerated in the last two years, the realtor representing Glen Ridge expects even greater difficulty finding buyers for such communities due to increased competition from an approved age-restricted development in Columbia and the proposed development in Coventry.

Two leading developers of active adult communities are Pulte Homes and Toll Brothers, along with family developer Orvedal Builders. The closest development is in West Hartford, which has 71 units beginning at \$379,975. The active adult communities in this area are built in clustered formations and have 38 to 98 units on the site. The homes are either single-family or duplex townhouses and range in size from 1,785 to 2,510 SF. Prices vary depending greatly on location and size, but prices per square foot ranged from \$125 to \$227 (See Table 7).

Table 7: Active Adult Communities, Connecticut

Community Name, Location, Developer	Units	Average Price per SF
Carlson's Ridge New Milford, CT (Pulte Homes)	48	\$159
Oxbow Ridge Canton, CT (Pulte Homes)	98	\$145
Glen Ridge Mansfield, CT	51	\$160
Regency Meadows at Trumbull Trumbull, CT (Toll Brothers)	38	\$185
The Villas at the Reservoir West Hartford, CT (Toll Brothers)	71	\$201

Market Position and Opportunities for Storrs Center

The housing types that we have recommended for Storrs Center—townhouses, condominiums, and small lot single-family homes—are particularly attractive to aging residents who do not want to worry about maintenance issues. The downtown location, proximity to UConn’s classrooms, and nearby walking trails will provide the amenities many active adults desire. The experience of developers of age-restricted housing in the area has not been highly successful. However, Storrs Center housing of the type described above will allow the developer the flexibility to capture a portion of this market segment.

4.4 Senior Housing

Four different types of retirement communities can fulfill a range of seniors’ needs. These communities include:

- Independent living
- Assisted living
- Nursing home
- Continuing Care Retirement Communities (CCRC)

Independent living communities are targeted to people in their 70s and above. Amenities such as transportation, assistance with meals and household tasks are frequently provided. Units in independent living communities are both rental and for-sale with additional charges for services. These communities are not heavily regulated because they do not provide health care services. Typically, projects range in size between 20 and 250 units and are frequently associated with universities.

Assisted living communities target the more frail elderly population and are often mixed with independent living units. There is a greater emphasis on personal and health services, including meals and household tasks. Some facilities offer care for patients with Alzheimers or other forms of dementia and provide limited skilled nursing. Because of this level of health services, these communities are affected by licensing and regulations and are also eligible for financial assistance from government sources. Assisted living communities usually rent units on a monthly basis and often range in size from 50 to 70 units.

Nursing homes provide full-time nursing care for patients with serious medical problems; they are heavily regulated. The number of nursing homes has grown significantly over the years, in part due to shorter hospital stays and a growing number of elderly. Nursing homes may be combined with other types of senior housing.

Continuing Care Retirement Communities offer a combination of the housing types described above. CCRCs are designed to meet the changing needs of residents so that seniors have an opportunity to “age in place.” These communities have more than 200 units on average and vary in configuration and density, depending on their location. Residents are charged an entrance fee and pay a monthly service charge. Units are both for-sale and rent. Typically, the smallest quality CCRC

facilities serve 100 households with a mixture of housing types consisting of 70 independent residential units, 20 assisted living units, and a 60-bed nursing facility.

According to the National Investment Center for the Seniors Housing & Care Industries (NIC), there was a total of 46,131 seniors housing properties with supportive services in the United States as of 1999-2000. Together, these properties had capacity to house more than 3.4 million seniors. Fifty percent of these properties were assisted living communities, 34% were nursing facilities, 7% were independent living communities, 4% were CCRCs, and 5% offered a combination of property types.

There are seven non-subsidized retirement communities in the 15-mile Mansfield trade area that supply a combination of 499 units and beds, of which 367 are nursing care beds, 21 are assisted living units, and 111 are independent living units (see Table 8). None are CCRCs. The only facility in Mansfield itself is Mansfield Center for Nursing & Rehabilitation, which has 75 of its 98 beds dedicated to long-term nursing care. There are additional HUD-subsized facilities in the area, but they are not included in this study.

Table 8: Mansfield Area Retirement Communities

Company Name	City	Facility Information			Total

Total		367	21	111	499

Source: American Association of Homes and Services for the Aging (www.aahsa.org)

Sunrise Senior Living, the largest developer of senior housing in the country, recently developed a community outside of the trade area in West Hartford. Its experience and characteristics help to shed light on the Mansfield market. Developed on four acres that it owns, Sunrise opened in early 2001 and has a capacity of 91 rental units. Rooms rent for between \$99 and \$160 per day, depending on the level of care required. The community offers a range of housing options, including independent living units, assisted living units, and advanced care for Alzheimer's patients. While the lease up period of a typical Sunrise community is 18 months, Sunrise of West Hartford has just 65 residents, leaving a 28% vacancy rate after 30 months. An executive of Sunrise attributed this slow absorption to the highly competitive market and lower population density.

Conversations with non-profit private developers suggest that demand for CCRCs can be estimated loosely by determining the number of income-qualified households (set at \$50,000 and higher) with householders aged 65 and older within a 15-mile trade area. These developers also take into consideration total assets, which are unavailable for this study. Non-profit development corporations must sell 75% of these units before they can begin construction.

Within the 15-mile Mansfield trade area, there are 2,211 households that fit these criteria, of which only 653 are 75 or older. Experienced non-profit developers anticipate achieving a 5% penetration rate of age and income qualified households, bringing the estimated demand to 110-115 units. A minimum development of 100 units is considered essential by developers to achieve the appropriate economies of scale.

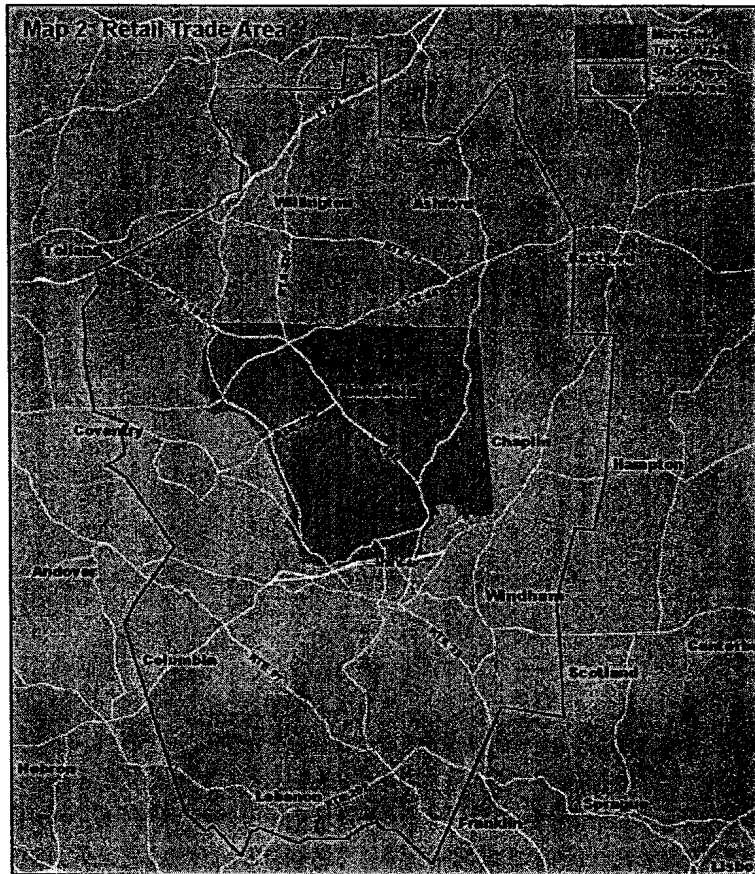

Market Position and Opportunities for Storrs Center

A successful retirement community at Storrs Center would need to include the kind of mixed amenities found in CCRCs, allowing Mansfield residents to “age in place” and take advantage of the downtown location, walking trails, and association with the university. While there is already a 75 bed nursing home in Mansfield, there is likely enough demand to construct a 100-household CCRC with 70 independent residential units, 20 assisted living units, and a 60-bed nursing facility.

5.0 RETAIL MARKET ANALYSIS

5.1 Trade Area Definition

The retail trade area is divided into two market areas: the primary trade area, which is the entire Town of Mansfield, and the secondary trade area, which stretches out to approximately a ten-mile radius following the block group boundaries set by the U.S. Census (see **Map 2**). Portions of Ashford, Chaplin, Columbia, Coventry, Lebanon, Tolland, Willington, and Windham are included in the secondary trade area. The trade area taken as a whole, in this report, is referred to as the Greater Mansfield Trade Area.

5.2 Trade Area Retail Supply

To identify and characterize shopping opportunities available to trade area residents, Urban Partners completed an inventory of all retail business establishments located both within Mansfield and non-convenience type business establishments throughout the Greater Mansfield Trade Area. The results of this inventory, characterized by retail type, location and size of the business, are included as **Appendix 1** to this document.

This study focuses chiefly on retail stores engaged in selling merchandise for personal and/or household consumption and on establishments that render services incidental to the sale of these goods. Selected service establishments are also included, especially those businesses primarily providing personal services to individuals and households, such as hair and nail salons and laundry and dry cleaning establishments.

All retail establishments in the area were classified by type of business according to the principal lines of merchandise sold, the usual trade designation, estimated square footage, and level of sales. All establishments are classified according to the numeric system established for both government and industry practice – the NAICS. Banks and other financial establishments are excluded from this assessment because banking activities – deposits, loans, etc. – cannot be added to sales volume data for other types of retail establishments.

The term “retail store sales” in this analysis includes sales by establishments that are normally found

in pedestrian-oriented retail shopping areas. This definition excludes the sales of automobile dealerships and repair facilities, service stations, fuel oil dealers, and non-store retailing. Unlike many secondary data sources, such as the Bureau of the Census, however, this definition does include the sales of service establishments such as barber shops, beauty salons, and dry cleaners.

Table 9 describes the current range of stores available in Mansfield and the surrounding 10-mile secondary trade area and estimates the current performance of these stores. As of July 2003, Mansfield included 143 operating retail businesses occupying nearly 507,200 square feet of store space and generating nearly \$164 million in sales. The secondary trade area included 115 operating non-convenience type retail businesses occupying 621,700 square feet and generating nearly \$161 million in sales.

Mansfield provides a broad, but incomplete, array of convenience goods and services, chiefly to residents of the surrounding area. This area includes two supermarkets, 12 convenience stores, one specialty food store, eight liquor stores, three drug stores, one health food supplement store, 24 limited-service restaurants, two optical stores, one video store, two florists, 15 hair salons, and five laundries. In total, 56 businesses sell convenience goods, while an additional 30 sell personal services. Together these 76 stores occupy 39% of all store space and generate more than 47% of all sales. The most important of these businesses are the two supermarkets, three drug stores, 24 limited-service restaurants, and 12 convenience stores.

While the secondary trade area contains many convenience goods stores, it is our assumption that Mansfield residents limit their shopping for such goods to stores within Mansfield. Therefore, the convenience businesses outside of Mansfield have not been included in this analysis. Similarly, residents from surrounding municipalities are not likely to travel all the way to Storrs Center for convenience goods that they can buy within their hometowns.

Full-service restaurants could be an important component of retail development in Storrs Center and these facilities could attract customers from throughout the Greater Mansfield Trade Area. Currently, the Greater Mansfield Trade Area includes 64 full-service restaurants, 23 in Mansfield itself and 41 in the secondary trade area. In Mansfield, full-service restaurants occupy 14% of all store space and generate 11% of all sales.

The retail offerings in the Greater Mansfield Trade Area are completed by a reasonably diverse array of 80 shopping goods and 38 stores classified as "other retailing." These 118 businesses provide products in 34 different categories, including 21 apparel stores, 17 gift shops, 10 antique stores, eight electronics stores, and five each of home centers, bookstores, and nurseries.

Of the 118 shopping and other retail businesses in the Greater Mansfield Trade Area, 44 of them are in Mansfield and 74 are in the secondary trade area. In Mansfield, the retail offerings are spread fairly evenly across 23 different categories, with the greatest concentration of retail businesses in the 12 apparel-type stores and six gift shops. Retail businesses in the secondary trade area are spread across 25 categories, with the greatest concentration in the 11 gift shops, 10 antique stores, nine apparel stores, six electronics stores, and six auto parts stores. Much of the diversity in shopping goods retailing in the secondary trade area comes from independent stores in Willimantic that provide specialized offerings to a customer base from throughout the area. These stores provide such items

as musical instruments, sewing equipment, and fabric, framing, cameras, computers, and sporting goods.

Although largely dominated by independent retailers, the Greater Mansfield Trade Area does include 65 outlets of major national and regional retail chains, including 19 of the 25 stores generating the highest estimated gross sales in the area. Twenty of the Greater Mansfield Trade Area's 65 national and regional retail chains are located in the East Brook Mall, which has significant vacancy and shows signs of suffering from competition in Manchester and Vernon and at the new Walmart in Windham.

5.3 Trade Area Retail Demand

Based on 2000 Census data, the Greater Mansfield Trade Area has a population of 81,197. The 2003 per capita income for the area (using 2000 Census income data adjusted for inflation) is estimated at \$23,300, and the total income for the area is approximately \$1.89 billion (see **Table 10**). The estimated per capita income is misleading, however, as it includes both the year round population and also undergraduate students living on and off campus. Therefore, we have distinguished between the estimated per capita income of Mansfield residents (both graduate students and non-students), undergraduate students living off-campus, undergraduate students who live on campus, and residents of the secondary trade area. The estimated per capita income for Mansfield residents and graduate students is \$30,400. Undergraduates living off campus have a per capita income of \$6,100, while those living on campus have a per capita income of \$5,000. The secondary trade area has an estimated per capita income of \$25,400.

In general, consumer shopping patterns vary depending on the types of goods being purchased. For convenience goods purchased frequently, such as groceries, drugs, and prepared foods, shoppers typically make purchases at stores close to their home or place of work. For larger-ticket, rarely purchased items-such as automobiles, electronics and large appliances-shoppers may travel anywhere within the metropolitan area or beyond to obtain the right item at the right price. For apparel, household furnishings, and other shopping goods, consumers generally establish shopping patterns between these two extremes, trading at a number of shopping areas within a 30 minute commute of their homes.

Using information about the retail spending behavior of Hartford area residents as compiled by Sales and Marketing Management, we estimate that Mansfield residents (both students and non-students) spend \$200.3 million in 2003 on retail goods and services, while residents of the secondary trade area spend another \$613.4 million. Of the purchases by secondary trade area residents, \$225.6 million are for convenience goods and services that they are unlikely to purchase at Storrs Center. The remaining \$387.8 million in purchases are in categories where these consumers might consider purchases in Storrs Center. Therefore, the effective retail demand in 2003 for goods and services available at Storrs Center is \$587 million, including \$68.6 million in convenience goods and services purchases by Mansfield residents only, and \$518.7 million in demand for full-service restaurants, shopping goods, and other retail products coming from throughout the Greater Mansfield Trade Area.

Urban Partners 8/2003

5.4 Resident and Student Shopping Patterns

Mansfield residents and UConn students, faculty, and staff who attended community meetings on April 22 and May 1 were encouraged to complete surveys indicating their current shopping patterns (see **Appendix 2** for sample surveys and tallied responses). Thirty-five students and 35 residents, faculty, and staff completed these surveys, which asked where respondents shop for groceries, pharmaceutical goods, and clothes, as well as where they most recently dined and which Storrs Center stores they have frequented over the past year. Students and residents were asked to complete different surveys in order to gain an understanding of the different shopping habits of both groups. Percentage totals add up to greater than 100% in some cases because responses were not limited to one answer.

Among the stores visited at the Storrs Center, the top five visited retail businesses by UConn students are Store 24 (49%), Friendly's (34%), D.P. Dough (29%), Chang's Garden (23%), and Starbucks (14%).

Eighty-five percent of the student respondents stated that they recently have eaten off-campus in Mansfield. Students chose to eat in Mansfield almost three quarters of the time. While preference for dining spots is widely scattered, the most popular restaurants noted in the survey are Friendly's (37%), Chang's Garden (17%), Margarita's (17%), and Wings Over Storrs (17%). Fourteen percent responded that they frequent restaurants in Manchester.

Eighty percent of students fill their prescriptions and drug store needs in Mansfield, while 14% shop at home. A majority of students (54%) shop at the CVS at Four Corners, while 14% stated that they go to the UConn Infirmary and 6% go to Stop & Shop.

Students get their groceries primarily at the Grand Union (46%) and the Big Y (34%). The remainder of students stated that they get their groceries while at home (14%), at Stop & Shop (14%), or at Walmart (9%). Again, percentages total greater than 100% because several students shop at multiple grocery stores.

The increasing trend to purchase music online is evident in the 31% of student respondents who said that they shop for music exclusively on the internet. Twenty-six percent of students buy their music in the Buckland Hills Mall area in Manchester, and 17% buy their music at the UConn Co-op.

Half of all students who responded said that they do their laundry at home, and 47% say they do their laundry in the dorms.

Over half of all respondents said that they get their hair cut at home, as well. Six percent get their hair cut at the Barber Shop, and another 6% get it cut at Campus Cuts.

Not surprisingly, given the rural nature of UConn's campus, three-quarters of all the student respondents stated that they have a car, while 24% do not.

Students were asked to provide information about the types of retail goods they would like to see at the proposed Storrs Center. Half of all students stated that they wanted restaurants, including a 24-

hour diner, ethnic restaurants, restaurants with outdoor dining, and a breakfast/lunch spot that offers salads and wraps. Thirty-one percent cited a need for bars, including those with live entertainment. Another 11% requested a grocery store, with some emphasis on organic food offerings; and 11% would like a music store, such as Sam Goody or FYE. Other top retail goods mentioned were a bookstore, clothing stores, and a dance club, each at 9%. In all, students mentioned 39 different store types that they would prefer to see in Storrs Center (see Table 11).

The 35 Mansfield residents who responded listed 68 distinct stores in Mansfield where they prefer to shop. However, there may be some duplication because some people were specific about the stores they visited and others were vague (e.g., CVS v. pharmacy). Seventy-one percent of residents indicated that they go to restaurants in the area, 51% shop at convenience and personal service stores, 23% shop in stores categorized as "other retail," such as hardware and florists, and 20% visited shopping goods stores.

Table 11: Top Student Responses for Desired Retail Goods at Storrs Center

51%	18	Restaurant (comment: e.g. John Harvard's)
	2/18	24hr diner
	1/18	Thai or sushi
	2/18	Ethnic
	1/18	Outdoor dining
	1/18	Breakfast/lunch w/ salads & wraps
	1/18	Small places to eat, not chains
31%	11	Bars (live entertainment)
11%	4	Groceries (Natural food, Mansfield Coop)
11%	4	Music store (Sam Goody, FYE)
9%	3	Bookstore
9%	3	Clothing stores (comment: e.g. Gap)
9%	3	Dance club (comment: e.g. Husky Blues)
6%	2	Art gallery
6%	2	Coffee shop
6%	2	Community center
6%	2	Dance studio
6%	2	Deli
6%	2	Movie theater
6%	2	Retail
6%	2	Shopping Mall
6%	2	Video store

The most frequently listed stores were Storrs Drug (40%), Store 24 (37%), and CVS (20%).

Of those who indicated that they were a member of UConn's faculty or staff, more than a third leave campus once a week for lunch or errands, while a quarter leave several times a week and another quarter leave daily. Only 12% stated that they leave either rarely or never.

The faculty and staff who stated that they go out to lunch on occasion cited a wide variety of restaurants where they like to eat, with Chang's Garden receiving the highest percentage of 14%. Groceries, however, are more concentrated, with 54% of Mansfield residents stating that they do their grocery shopping at the Big Y on 195 and 23% at the Grand Union.

Mansfield residents also do most of their drug store shopping at just a couple of stores, with Storrs Drug drawing 60% of the respondents, and CVS at Four Corners attracting 26% of the respondents.

Residents were asked which two restaurants they had visited most recently, which resulted in a list of 36 distinct restaurants. Thirty-nine percent of these restaurants are in Mansfield. The four most frequently mentioned restaurants are Chang's Garden (31%), Angellino's (20%), Altnaveigh's (11%), and Zenny's (11%).

Most residents, at least 37%, do their clothing shopping in Manchester at the Buckland Hills Mall,

while another quarter indicated that they shop for clothes outside of the Mansfield area. A quarter of the residents shop at East Brook Mall, and 17% do their clothes shopping through a catalog or online.

Residents were asked to provide their input on the kinds of retail goods they would like to see in the proposed Storrs Center. Thirty-seven percent wanted a grocery store, especially a green grocer type store selling health food and local produce. Another 31% wanted restaurants, and like students, emphasized their desire for a diverse mix of ethnic restaurants and cafés. Twenty-

three percent would like clothing stores, and 14% want a movie theater. There were 30 additional categories of retail goods residents listed as appropriate for Storrs Center, including a bakery, art galleries, and a farmer's market (see Table 12).

Table 12: Top Resident Responses for Desired Retail Goods at Storrs Center

37%	13	Grocery store
1/13		Asian and/or international
2/13		Food coop/local produce
5/13		Green grocer
1/13		Health food
31%	11	Restaurant
1/11		Ethnic
2/11		Indian
1/11		Lunch café
1/11		Mexican
2/11		Thai
1/11		Variety
23%	8	Clothing store (Talbots, Land's End, Appleseed, Footprints)
14%	5	Movie theater
9%	3	Bakery
6%	2	Art shows
6%	2	Bike shop
6%	2	Bookstore
6%	2	Boutiques
6%	2	Farmer's market
6%	2	Gift shop
6%	2	Hardware store
6%	2	Live music café (Non-alcoholic)
6%	2	Outdoor café (Phils)
6%	2	Radio Shack
6%	2	Sporting goods (Outdoor products)

5.5 Comparable University Center Retailing

An alternative approach to assessing the potential for retail and commercial development in Storrs Center involves comparing the current pattern of development in Storrs to the patterns found adjacent to other Universities of similar size and location. To assess this potential, Urban Partners conducted a comprehensive search for appropriate comparison town-gown situations. This search identified comparison opportunities based on comparable student population (between 10,000 and 26,000); campus location (between 10 and 50 miles from the center of a metropolitan statistical area); and metropolitan area size (between 950,000 and 1,500,000). (Note: the population of the Hartford MSA is 1,200,000). Campuses in exurban locations such as Mansfield were emphasized. Similarly, campuses in areas with strong non-University employment bases and/or strong tourism activity were excluded. This search process identified five prime comparable town-gown situations (see Table 13).

Table 13: List of Comparable Universities

School	Student Enrollment	Number of Faculty & Staff	Location of School	City Population	Center of MSA	Distance of Center of MSA from School	Population of MSA
University of Connecticut	18,525	3,690	Mansfield, CT	20,720	Hartford, CT	30 miles	1,183,110
Clemson University	16,876	4,547	Clemson SC	11,939	Greenville, SC	35 miles	962,441
Oklahoma State University	22,992	3,810	Stillwater, OK	39,065	Oklahoma City, OK	50 miles	1,083,346
Southwest Texas State University	25,025	2,607	San Marcos, TX	34,733	Austin, TX	30 miles	1,249,763
University of Delaware	19,609	3,320	Newark, DE	28,547	Wilmington, DE	15 miles	6,188,463*
University of North Carolina--Chapel Hill	26,028	10,481	Chapel Hill, NC	48,715	Durham, NC	12 miles	1,187,941

*MSA includes Philadelphia and Atlantic City

Retail establishments adjacent to these universities were identified to determine the extent of retail activity in these university towns. Only restaurants, clothing stores, bookstores, shoe stores, music/video stores, and gift/novelty shops were included in the search.

Within these categories, the area immediately surrounding the University has 31 retail establishments, including 20 restaurants (see **Table 14**). Three of the five identified comparables have significantly more establishments in these categories (from 54 to 80), while the other two have a more diverse array of stores. Based on these comparables, we would expect Storrs to include approximately 50 to 60 stores in these categories. To achieve the scale and balance of retailing seen in these comparables, Storrs would need to add:

- 10 to 15 more restaurants, including several full-service restaurants;
- six to eight clothing and shoe stores;
- two to four music and/or video stores; and
- two to four more gift and novelty shops.

Table 14: University Affiliated Retail

School	Restaurants	Clothing	Book Stores	Shoe Stores	Music/Video	Gifts/Novelty	Non-Classified Establishments	TOTAL
University of Connecticut	20	1	2	0	0	1	7	31
University of North Carolina	49	8	3	2	4	3	11	80
University of Delaware	36	5	2	0	3	5	3	54

5.6 Retail Development Opportunities

Table 15 compares the retail purchases made by the 81,000 Greater Mansfield Trade Area residents with the current level of retail sales in the area. This comparison identifies a total of \$298.3 million in unmet sales potential lost to stores outside the trade area. Of the unmet demand, \$10.7 million is lost convenience goods sales, most significantly \$4.6 million in lost sales by drug stores. In addition, \$7.5 million in full-service restaurant sales are leaving the trade area.

The more significant “lost sales” are in shopping goods categories (apparel, home furnishings, etc.) and in freestanding “other retail stores.” More than \$280 million of these sales are leaving the area, largely to the concentration of modern shopping centers and malls in Manchester and Vernon.

In some cases, the level of lost retail sales is insufficient to support another modern, successful store within the trade area. Examples of such inadequate levels of demand are specialty food stores, office supply businesses, and home improvement centers. On the other hand, the lost sales in 46 different retail categories are sufficient to support a viable store within the trade area. As shown on Table 15, these lost sales are supporting 1.1 million square feet of retail space outside the trade area.

What portion of this lost development potential is reasonable to target for Storrs Center? This

Table 15
Potential for Retail Development
Greater Mansfield Trade Area - 2003

RETAIL CATEGORY	Total Unmet Sales Potential (\$000)	Unmet Demand for Convenience Goods & Services in Mansfield	Unmet Demand for Full-Service Restaurants, Shopping Goods, Etc. Urban Partners 9/2003

question leads to two others: What store types are physically compatible with the development of a mixed use Storrs Center? What is the portion of the unmet demand that can be reasonably captured by stores that would choose a location such as Storrs Center?

Regarding physical compatibility, Storrs Center will be appropriate for most store types, but not for large format stores, such as department stores; for lower sales value businesses, such as used merchandise stores; or for stores requiring significant truck and vehicle access, such as lumber yards, nurseries, or auto parts stores.

Among the remaining store categories, we believe it is reasonable for Storrs Center to target a capture of 20% to 40% of lost sales potential. The key exceptions to this target sales capture are drug store sales, where we target capture of the full 100% of lost potential, because the shortage of existing drug store space in Mansfield is concentrated near Storrs; and full-service restaurant sales, where we target capture of 60% of lost potential, because of the attraction of a University-adjacent environment for destination dining.

In total, we have identified 183,000 SF of new store space as a priority for development in Storrs Center. This 183,000 SF of space includes stores pursuing four different market opportunities:

- 18,000 SF of convenience goods stores and 20,000 SF of other retail stores are serving the unmet needs of the immediately adjacent portions of Mansfield;
- 16,000 SF of full-service restaurants are creating a destination dining location near the University and expanding the range of restaurant offerings in Storrs to be similar to the patterns found above in comparable university-adjacent shopping districts;
- 59,000 SF of apparel stores are establishing a niche apparel shopping location with an identity distinct from typical mall apparel offerings; and
- 70,000 SF of home furnishings, other shopping goods, and freestanding stores are independently attracting customers from throughout the trade area to a convenient location with significant shopping ambience.

The 38,000 SF of stores serving the immediately adjacent residents include:

- 8,000 SF of new drug store space, perhaps facilitating a significant expansion of the current drug store;
- 10,000 SF of other convenience goods serving the immediately adjacent portions of Mansfield. Potential new stores include a modest increase in limited-service restaurants and bars; beauty supply, health food supplement, and other health products stores; an optical store; and an expanded florist;
- 20,000 SF of freestanding stores such as a dollar/general merchandise store, a paint store, a hardware store, and a pet supply store.

The 16,000 SF of new full-service restaurants will add five to eight new dining destinations to create an active evening atmosphere for Storrs Center, to expand the range of dining options to levels similar to those found in comparable university-adjacent shopping districts, and to attract non-student customers to Storrs Center for a varied retail shopping experience.

The 59,000 SF of apparel stores includes a variety of smaller men's, women's, children's, and family clothing boutiques, as well as shoe stores and jewelers. These stores should be successful by serving two roles—first, by creating a niche apparel shopping location for residents of Mansfield and surrounding towns that is more convenient than the mall concentrations in Manchester and Vernon and which provides a much more interesting and relaxed atmosphere; secondly, by providing for the UConn student and staff community the cluster of apparel and shoe stores identified above as typical of the shopping districts in comparable University communities.

Finally, the retail offerings in Storrs Center will be diversified by adding 70,000 SF of shopping goods and other retail stores that will draw their customer bases independently from throughout the trade area, but will collectively create a varied shopping experience in Storrs. These stores could include:

- 28,000 SF of home furnishings and decoration stores (furniture, floor coverings, miscellaneous home furnishings, art dealers);
- 10,000 SF of electronics and computer stores;
- two additional gift shops (4,000 SF), a 2,000 SF music store, and a 3,000 SF CD store, again creating the level of shopping opportunities found in comparable University communities;
- 14,000 SF of specialty interest shopping goods stores (specialty sporting goods, toys and hobbies, sewing/needlework, photography, collectors items); and
- other stores such as a newsstand, a tobacconist, and a leather goods store.

Taken together, these 183,000 SF of retail stores will nearly triple the 106,000 SF of retail offerings currently available in Storrs Center, including on-campus facilities (see **Table 16**). When added to the current stores, the total retail availability in Storrs will reach 289,000 SF. The pattern of shopping available will rival the mix found in comparable University-adjacent shopping districts.

The mix of stores suggested for addition to Storrs Center meets most of the needs identified by students and residents in surveys reported above. The five to eight new full-service restaurants suggested here will likely meet requests for a 24-hour diner, ethnic restaurants, restaurants with outdoor dining, cafes, and a breakfast/lunch spot that offers salads and wraps. The recommended additional bar could readily respond to student requests for a live entertainment venue. Other requested stores included in on Tables 12 and 13 are a CD store, clothing stores, and art galleries.

The one significant request that does not appear to have economic support as a freestanding business is the desire for additional specialty foods, especially a bakery and a small grocery store, green grocer (such as the Wild Scallion Market), or farmer's market emphasizing organic food offerings. Such a facility, however, could be an important draw of customers to Storrs Center and might be considered by a developer as a feature for the retail program, either as a business venture with subsidized rent levels or as a seasonal marketplace of vendors.

Table 16
Retail Development Program
Storrs Center -- 2003

Urban Partners 9/2003

6.0 OFFICE MARKET ANALYSIS

The primary users of office space in the area are medical, professional, and psychiatric offices. According to the 2001 Business Profile of the Connecticut Department of Economic and Community Development, 62.5% of the town's 576 businesses are in the Services sector, followed by 17.8% in the Trade sector, and 9.2% in Government.

According to data supplied by the Town of Mansfield for the HyettPalma study completed in 2000, there were 23 office businesses occupying 65,775 SF in Mansfield at that time. General government users, filling 26,000 SF or 40% of total office space, occupies the largest share of office space. Health Services follows at a distance, occupying 13% of office space or 9,650 SF distributed among 5 users. Other non-governmental users include business services (5,050 SF), educational services (5,000 SF), depository institutions (3,700 SF), and engineering/management services (2,925 SF). At the time this data was prepared, there was only one vacant office space recorded, leaving 3,100 SF of space available (see **Table 17**).

Realtors describe the Mansfield area office market as soft to fair. One lot zoned for office has been standing undeveloped for two years because the owner cannot find tenants for his building. Several buildings throughout the area run consistent vacancies. Class A space in Windham has had vacancies for three years. One realtor, which represents three office buildings in Mansfield with a total of 13,700 SF, reported 3,500 SF vacant. In Tolland, the same realtor has two buildings that total 35,000 SF, of which 5,500 SF is vacant. Asking rents in the area are a little less than \$15 per square foot.

A 50,000 SF office building in Willimantic is asking half its previous rental rate, in part because of the new Windham Mills project, which is said to have over-saturated the office market in the area. Asking rents in this area are typically \$8 per square foot, but go as low as \$4 per square foot.

There has been no new commercial development in Mansfield since 1988. All new development is severely limited due to the lack of a public sewer system in Mansfield. Realtors suspect that there would be some interest in relocating to a central location near UConn should office space be developed.

Market Position and Opportunities for Storrs Center

Considering the current economic climate and existing supply of office space, there likely will not be sufficient demand to support significant new commercial office space at this time. Once Storrs Center is more firmly established as a commercial and residential center, it may be possible to develop a limited amount of professional and service office space.

Table 17: Downtown Mansfield Office Businesses by Standard Industrial Classification

7.0 HOTEL MARKET ANALYSIS

Hotel accommodations in Mansfield are limited to the 88-room Best Western Regent Inn and the 100-room Nathan Hale Inn, which opened on the UConn campus in 2001. Most other nearby hotels are located in the Manchester/Vernon/East Hartford area. Other recent additions are the Super 8 in Manchester as of December 2001 with 80 rooms; and the EconoLodge in East Hartford as of July 2002 with 85 rooms. Within this larger area, 26 properties provide 2,511 rooms (see Table 18).

Hotel room demand within this larger area grew from 450,000 room-nights in 1997 to 534,500 room-nights in 2000, a total growth of 18.8% in three years. Room supply only grew modestly during this period from 717,300 room-nights to 787,500 room-nights. As a result, occupancy increased from 62.7% to 67.9%, and the average room rate grew from \$59.44 to \$78.17.

Table 18: Hotel Market Analysis, January 1997 - April 2003

Year	Occupancy		Room Rate	
	Percent	% Chg	\$	% Chg
1997	62.7	4.5	59.44	10.6
1998	67.2	7.2	62.23	4.7
1999	65.7	-2.2	67.08	7.8
2000	67.9	3.3	78.17	16.5
2001	64.2	-5.4	81.00	3.6
2002	59.6	-7.2	77.64	-4.1
2003	Current YTD	49.8	74.29	-2.6

Source: Smith Travel Research

During 2001 and 2002, four new properties with a total of 369 rooms came on line, increasing supply to 906,900 room-nights in 2002, a gain of 15.1% since 2000. At the same time, room demand stayed essentially flat, growing to only 540,100 in 2002—a mere 1% increase over 2000 levels of demand. As a result, occupancy dropped back to 59.6% in 2002 and average room rates stagnated, dropping slightly to \$77.64 in 2002. The first four months of 2003 suggest that occupancy this year will drop even further, with year-to-date occupancy at 49.8%—down from 53.8% during the same period last year.

The Nathan Hale Inn & Conference Center year-to-date occupancy is about 60%, with its lowest season in the winter at 25-40% and its peak season in the summer at 75-85%. Since opening, it continues to struggle to reach its annual occupancy goal of 65%. Its most immediate competitor, the Best Western on 195, is facing very difficult times, with year-to-date occupancy at about 49% and no days during the year where they were at full occupancy, including graduation. The Nathan Hale has an agreement with University that no other hotel can be built on University owned land for five years since its opening. The Inn is attempting to increase occupancy to 75% by marketing to conference exhibitors, at which point, it will expand to 150 rooms. The hotel is expecting the expansion to occur in 2006/7.

Market Position and Opportunities for Storrs Center

Based on these circumstances, a new hotel in Storrs Center is not a viable development option, at least through 2009.

8.0 ENTERTAINMENT MARKET ANALYSIS

There are currently seven movie screens in the 10-mile Mansfield trade area, including a three-screen drive-in theater in Mansfield and a six-screen theater in Willimantic. According to Mansfield sources, the theater in Willimantic has not been attractive enough to draw significantly from Mansfield. The University of Connecticut has plans to build a single-screen theater on campus to show second-run movies at a discount to students and at full price to non-students. Applying the national standard for screens per capita, the 10-mile Mansfield trade area population of 81,334 suggests that there is enough demand to support 10 screens in the area.

Market Position and Opportunities for Storrs Center

According to current business models, new movie theaters occupy 50,000 to 75,000 SF and include 12 to 18 movie screens. Theaters of this size necessitate parking for approximately 1,200 to 1,500 cars. Current demand will not support such development in Storrs Center. However, in some circumstances, institutions and community organization have underwritten smaller movie complexes as anchors for town center development. For instance, a six screen movie theater was constructed near the University of Pennsylvania with financial backing and guarantees from the university. The movie theater also has a full-service restaurant and offers discounts to students.

A similar arrangement at Storrs Center would be feasible if the Storrs Center developer or UConn were to partner with a movie theater developer to construct a six to eight screen, 15,000 to 25,000 SF theater facility.

University of Connecticut Student Survey on the Municipal Development Plan for Storrs Center

Urban Partners is working with the Mansfield Downtown Partnership to create a Municipal Development Plan for Storrs Center, which is adjacent to the University of Connecticut main campus along Route 195. We would appreciate your assistance in completing the following brief and confidential survey that queries how you currently use retail stores and services in the area and asks for your ideas about how the area might be made more attractive to your needs.

Thank you for your participation in this project. Please return this survey by e-mail to cblackwell@urbanpartners.us. If you have any questions, please call Carolyn Blackwell at (215) 829-1906.

1. Do you live on or off campus? If off campus, where?
2. Are you an undergraduate or graduate student (circle one)?
3. How long have you been studying at UConn? 1yr 2yrs 3yrs 4+yrs
4. What retail and service establishments in the Storrs Center have you patronized in the past year?
5. When you eat off campus, what restaurants and other food establishments do you patronize?
(both in Mansfield and elsewhere)
6. Where do you have prescriptions filled and buy drug store items?
7. Where do you purchase grocery items?
8. Where do you purchase CDs, magazines, and computer supplies?
9. Where do you do your laundry?
10. Where do you have your hair cut?
11. Do you have a car or regularly have access to a car?
12. Which retail goods and services would make the Storrs Center more attractive to your needs, if available?

13. Do you have any other comments concerning the Storrs Center about which you would like us to be aware?

Thank you very much for input.

Mansfield Resident and University of Connecticut Faculty and Staff Survey on the Municipal Development Plan for Storrs Center

Urban Partners is working with the Mansfield Downtown Partnership to create a Municipal Development Plan for Storrs Center, which is adjacent to the University of Connecticut main campus along Route 195. We would appreciate your assistance in completing the following brief and confidential survey that queries how you currently use retail stores and services in the area and asks for your ideas about how the area might be made more attractive to your needs.

Thank you for your participation in this project. If you have any questions, please call Carolyn Blackwell at (215) 829-1906 or e-mail cblackwell@urbanpartners.us.

1. Where do you live?

☐ Mansfield

☐ Willimantic

☐ Willington

☐ Tolland

☐ Coventry

☐ Other (Name): _____

2. What retail stores and services in the Storrs Center or elsewhere in Mansfield do you patronize during the day or after work?

3. If applicable, how frequently do you leave campus to get lunch, run errands, etc.?

4. If you are affiliated with UConn and eat lunch off campus, where do you go? (both in Mansfield and surrounding area)

5. At what store do you most often buy groceries? (Name the store and where it is locate.)

_____ on _____

6. What pharmacy do you most frequently use?

_____ on _____

7. Name the last two restaurants where you had dinner with members of your household:

8. Where do you and other members of your household most frequently buy clothing?

9. Are there retail goods and services that, if available within the Storrs Center, would make the commercial district more attractive to your needs?

10. Do you have any other comments concerning the Storrs Center of which you would like us to be aware?

Thank you very much for input.
